

NoFun Labs | NONFUNGIBLE Whitepaper

Started 2-22-2022

Ethereal Mission.

NoFun Labs is on a mission to onboard the next billion *Seekers of Knowledge* to the blockchain.

Knowledge is the key to empowering this new generation of builders. It's also the flame that inspires them to make heart-led decisions, and to create a technically sound, secure, and free future.

Our community welcomes creativity, passion, curiosity, and ambition. We support each other in storytelling, gameplay, and mutual collaboration. We offer help beyond the existing blockchain communities, and bridge the gaps for those left on the blockchain universe's fringes.

We strive to make this an inclusive space, leveraging the resources of web3 and blockchain to ensure that no person misses out on the economic, organizational, and educational evolution.

We build, educate, and archive through comic books, games, and the vibrant cultures being shaped in real-time.

NoFun Labs is where you can come to ask questions, share ideas, enjoy discourse among peers, and find a support system that can help guide you through the opportunities of web3. We welcome new ideas and encourage you to question everything. Our values are based on the belief of...

Meliorism | *noun*

PHILOSOPHY

the belief that the world can be made better by human effort. We invite progress through communication, and work with our peers in the most honest, accurate, and loving way possible.

To dig deeper and understand the fundamentals of blockchain, and our values, we recommend this reading:

The Ethereal NoFun Labs Community Principles

Principle I: Trust and integrity are fundamental: Interactions within the community are transparent, honest, and fair. Members avoid actions that may undermine or take advantage of others.

No rug pulling.

Principle II: Mutual uplift is our ethos: we believe in enriching ourselves by enriching others and creating a nurturing environment.

Love thy peers.

Principle III: The Lab's sanctity is paramount; it serves as a sanctuary for open dialogue, intellectual curiosity, and community growth devoid of harm or offense.

Mission guided intent

Principle IV: Meliorism guides us: we believe in the capacity of human effort to make the world a better place.

Humans have the capacity for good.

Principle V: We operate democratically, striving for consensus in community decisions and maintaining active engagement.

By the People, for the People.

Principle VI: Autonomy of Identity and Liberty of Information are respected: we value every individual's right to privacy and autonomy of data.

The right to privacy.

Principle VII: Continuous learning is our commitment: we pledge to have open hearts and minds that are ever-ready to teach, learn, and evolve.

Our members are lifelong students.

Principle VIII: Our fundamental belief lies in progressive decentralization, but we also recognize the importance of embracing the harmonious duality of complementary opposites.

We encourage quantum thought

Principle IX: Empowering the marginalized is our objective: we are committed to making learning accessible to all by addressing language, economic, and learning style barriers.

We work towards equanimous opportunity.

Principle X: Personal responsibility for knowledge is our standard: we verify information and form our own opinions through due diligence and self-empowerment. We avoid making assumptions, and acknowledge our own ability to make mistakes.

Question everything.

Principle XI: Blockchain agnosticism is our stance: we strive for shared progress and growth while avoiding tribalistic behavior. We build bridges between technologies without discrimination.

No technology is an island.

Our vision is to build a system that places trust not in a single authority, but in a network of dedicated ameliorators.

Great communities are co-created together. This system must be governed jointly by its contributors and users, ensuring an open dialogue and fostering myriad perspectives. This is the key to discerning truth amidst a cacophony of information.

We propose a new system of learning that doesn't solely rely on live educators. We focus on gamified, socialized education.

The journey begins with small cohorts of early testers and evolves into a self-sufficient community of blockchain-savvy contributors. These individuals become "guardians of the blockchain": exemplary web3 citizens prepared to shape the future.
